The V1 is a next-generation passenger self service kiosk purposefully designed to meet the needs of the most demanding airport environments. Boasting a compact footprint, modern aesthetic and full service capability, the V1 reflects an extensive featureset designed through open dialogue with airport and airline stakeholder teams. The V1's extensive array of component options, print capacity and modular design, ensure a long life-cycle of high utilization and optimized passenger self service experience.

VELOCITYone

The V1 can be configured with an extensive range of components to deliver the full spectrum of service capability. A true next-generation kiosk, the V1 delivers broad printing options with a triple printer setup, high capacity 10" rolls and low/no paper sensors, full biometric capabilities including facial, iris and fingerprint options for single token systems, a full suite of payment device options aligned to EMV/PCI requirements and all within an ADA/DOT accessible design and interface..
